Respons To Amendment

In view of the applicants' response/amendment filed February 20, 2003, the rejection of the claims under 35 USC 112, second paragraph.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Nielinger et al (USP 4,762,910) newly cited.

Nielinger et al (USP 4,762,910 - newly cited) discloses a process for the preparation of a copolyamide condensate containing 25 to 48% by weight of units of hexamethylene terephthamide which comprises heating 40 to 70% by weight aqueous solution of adipic acid, terephthalic acid and hexamethylene diamine to at least 250°C under a pressure of at least 35 bar in less than 15 minutes and then distilling off water at a temperature of 260°-300°C at a pressure of 1-40 bar in one or more stages, whereby a precondensate having a relative viscosity of 1.5-2.4, as measured in a 1% by weight m-cresol solution at 25°C is obtained which is thereafter condensed to produce the copolyamide condensate; which anticipates the claimed invention. See abstract; col. 1, lines 9-28,33-68; col. 2, lines 1-32,35-42,57-68; Examples 1, 2, 3; claims 1-6.

Nielinger et al teaches that copolyamides of adipic acid, terephthalic acid and hexamethylene diamine with relatively high terephthalic acid contents may be obtained

Application/Control Number: 09/966,144

Art Unit: 1711

with improved properties by very rapidly heating the aqueous solution of the monomers for precondensation to a temperature of at least 250°C, preferably at least 260°C and then completing the condensation of the resulting precondensate to the desired molecular weight by known methods. See col. 2, lines 3-11, 12-32.

Nielinger et al teaches a process for the preparation of homogeneous polyamides of adipic acid, terephthalic acid and hexamethylene diamine containing from 25 to 48% by weight, preferably from 30 to 45% by weight of hexamethylene terephthalamide units, which polyamides are completely soluble in formic acid, wherein a 40 to 70% by weight aqueous solution, preferably a 45 to 65% solution, of the monomers is heated to at least 250°C, preferably 260°C to 300°C, in less than 15 minutes, preferably within 1 to 10 minutes, at a pressure of at least 35 bar, and the water is distilled off at a temperature of from 260°C to 300°C, at a pressure of 1 to 40 bar, preferably 1-35 bar, in one or more stages until a precondenste having a relative viscosity of rom 1.5 to 2.4, preferably from 1.8 to 2.3 is obtained, and the precondensate obtained at normal pressure is after-condensation may be carried out in the solid phase after the precondensate has solidified. See col. 2, lines 12-32; Example 1.

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of

preparing the polyamides and end products prepared therefrom; Torres, Leboeuf, Lin, Sakashita and Mains.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia H. Hightower whose telephone number is (703) 308-2434. The examiner can normally be reached on M-F from 9:30 A.M - 6:00 P. M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on 703-308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9311. for regular communications and 703-872-9310 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
